Data Structure Index

4.1 Data Structures

Here are the data structures with brief descriptions:

jeod::GravityControls	17
Specifies whether and how a GravitySource affects a vehicle	
jeod::GravityIntegFrame	29
Class that aids in determining whether gravity should be applied as a direct effect or a third body effect	
jeod::GravityInteraction	32
Specifies interactions between a vehicle and a set of gravitational bodies	
jeod::GravityManager	38
The master gravitational model for a simulation	
jeod::GravityMessages	44
Specifies the message IDs used in the gravity model	
jeod::GravitySource	48
Models the gravity for a specific planet;	
jeod::SphericalHarmonicsDeltaCoeffs	52
Base class for tidal and temporal gravity models	
jeod::SphericalHarmonicsDeltaCoeffsInit	57
Initialization data for a SphericalHarmonicsDeltaCoeffs instance	
jeod::SphericalHarmonicsDeltaControls	59
Provides controls for how a variational model affects a vehicle	
jeod::SphericalHarmonicsGravityControls	63
Specifies whether and how a SphericalHarmonicsGravitySource affects a vehicle	
jeod::SphericalHarmonicsGravitySource	77
Models the gravity for a specific planet using spherical harmonics	
jeod::SphericalHarmonicsGravitySource_default_data	86
jeod::SphericalHarmonicsGravitySource_earth_GEMT1_default_data	87
jeod::SphericalHarmonicsGravitySource_earth_GGM02C_default_data	88
jeod::SphericalHarmonicsGravitySource_earth_GGM05C_default_data	89
jeod::SphericalHarmonicsGravitySource_earth_spherical_default_data	90
jeod::SphericalHarmonicsGravitySource_jupiter_spherical_default_data	91
jeod::SphericalHarmonicsGravitySource_mars_MRO110B2_default_data	92
jeod::SphericalHarmonicsGravitySource_mars_spherical_default_data	93

- class [SphericalHarmonicsSolidBodyTides](#)
Models solid body tidal effects.
- class [SphericalHarmonicsSolidBodyTidesInit](#)
Initializes a solid body tides model.
- class [SphericalHarmonicsSolidBodyTidesInit_earth_solid_tides_default_data](#)
- class [SphericalHarmonicsTidalEffects](#)
Models tidal effects as a delta on top of a gravity model.
- class [SphericalHarmonicsTidalEffectsInit](#)
Initializes a tidal gravity model.

Variables

- static constexpr double [speed_of_light_sq](#) = 89875517873681764.0
The speed of light squared, in m^2/s^2 .

7.1.1 Detailed Description

Namespace jeod.

7.1.2 Variable Documentation

7.1.2.1 speed_of_light_sq

```
constexpr double jeod::speed_of_light_sq = 89875517873681764.0 [static]
```

The speed of light squared, in m^2/s^2 .

Definition at line 58 of file gravity_controls.cc.

Referenced by `jeod::GravityControls::calc_relativistic()`.

Chapter 8

Data Structure Documentation

8.1 jeod::GravityControls Class Reference

Specifies whether and how a [GravitySource](#) affects a vehicle.

```
#include <gravity_controls.hh>
```

Inheritance diagram for jeod::GravityControls:

Public Member Functions

- [GravityControls](#) ()=default
- virtual [~GravityControls](#) ()=default
- [GravityControls](#) (const [GravityControls](#) &)=delete
- [GravityControls](#) & operator= (const [GravityControls](#) &)=delete
- virtual void [initialize_control](#) ([GravityManager](#) &grav_man)
Initialize this GravityControl.
- virtual void [reset_control](#) ([BaseDynManager](#) &dyn_manager)
Reset subscriptions for this GravityControl.
- virtual void [gravitation](#) (const double integ_pos[3], unsigned int integ_frame_idx, double body_grav_accel[3], double dgdx[3][3], double Pot[1])
Compute the gravitation at a given position toward a gravity body.
- virtual void [gravitation](#) (const [RefFrame](#) &point_of_interest, unsigned int integ_frame_idx, double body_grav_accel[3], double dgdx[3][3], double &pot)
Compute the gravitation at a given position toward a gravity body.

Static Public Member Functions

- static bool [accel_mag_less_ptr](#) (const [GravityControls](#) *a, const [GravityControls](#) *b)
Compares the magnitude of the two input gravity controls, returning true if a->grav_accel_magsq is less than b->grav_accel_magsq, false otherwise.

Data Fields

- `std::string source_name`
Planet name.
- `bool active {}`
Gravity for this body active?
- `bool spherical {}`
Ignore non-spherical effects?
- `bool gradient {}`
Compute gravity gradient matrix?
- `bool perturbing_only {}`
Compute only the perturbing gravity?
- `bool battin_method {}`
Compute third body gravity using Battin's method (Battin, Mathematics and Methods of Astrodynamics)?
- `bool relativistic {}`
Indicates that the relativistic correction to Newtonian gravitation is to be computed.
- `GravitySource * body {}`
Pointer to the GravitySource object named by planet_name.
- `double grav_accel [3] {}`
Gravitational acceleration toward the GravitySource at the location of the DynBody, including third body effects.
- `double grav_grad [3][3] {}`
Gradient of the gravitational acceleration.
- `double grav_pot {}`
Gravitational potential.
- `double grav_accel_magsq {}`
Square of the magnitude of grav_accel.

Protected Member Functions

- `virtual void calc_nonspherical (const double integ_pos[3], const double posn[3], const GravityIntegFrame &grav_source_frame, double body_grav_accel[3], double dgdx[3][3], double &pot)=0`
Nominally, compute the non-spherical contribution to gravity at a given position.
- `void calc_relativistic (const RefFrame &point_of_interest, const double rel_pos[3], const double rel_vel[3], double perturbing_accel[3])`
Calculates the relativistic correction to gravitational acceleration.
- `void calc_spherical (const double integ_pos[3], const double posn[3], const GravityIntegFrame &grav_source_frame, double body_grav_accel[3], double dgdx[3][3], double &pot)`
Calculate the spherical gravitational acceleration, either directly or as a third body acceleration.

Protected Attributes

- `GravityManager * grav_manager {}`
Pointer to the simulation-wide GravityManager object.
- `bool subscribed_to_inertial {}`
Indicates that a subscription to the planet-centered inertial frame of the planet associated with the gravity_source been issued.
- `bool subscribed_to_pfix {}`
Indicates that a subscription to the planet-centered, planet-fixed frame of the planet associated with the gravity_source been issued.
- `bool skip_spherical {}`
Some derived classes' calc_nonspherical method computes all contributions to gravitation, including spherical.

Friends

- class [InputProcessor](#)
- void [init_attrjeod__GravityControls](#) ()

8.1.1 Detailed Description

Specifies whether and how a [GravitySource](#) affects a vehicle.

Definition at line 89 of file gravity_controls.hh.

8.1.2 Constructor & Destructor Documentation

8.1.2.1 GravityControls() [1/2]

```
jeod::GravityControls::GravityControls ( ) [default]
```

8.1.2.2 ~GravityControls()

```
virtual jeod::GravityControls::~~GravityControls ( ) [virtual], [default]
```

8.1.2.3 GravityControls() [2/2]

```
jeod::GravityControls::GravityControls (
    const GravityControls & ) [delete]
```

8.1.3 Member Function Documentation

8.1.3.1 accel_mag_less_ptr()

```
static bool jeod::GravityControls::accel_mag_less_ptr (
    const GravityControls * a,
    const GravityControls * b ) [inline], [static]
```

Compares the magnitude of the two input gravity controls, returning true if `a->grav_accel_magsq` is less than `b->grav_accel_magsq`, false otherwise.

Returns

Result of comparison

Parameters

<i>a</i>	First control to be compared.
<i>b</i>	Second control to be compared.

Definition at line 228 of file gravity_controls.hh.

Referenced by `jeod::GravityInteraction::sort_controls()`.

8.1.3.2 `calc_nonspherical()`

```
virtual void jeod::GravityControls::calc_nonspherical (
    const double integ_pos[3],
    const double posn[3],
    const GravityIntegFrame & grav_source_frame,
    double body_grav_accel[3],
    double dgdx[3][3],
    double & pot ) [protected], [pure virtual]
```

Nominally, compute the non-spherical contribution to gravity at a given position.

Derived classes whose override of this function computes the full gravitation model, including the spherical contribution, should set the `skip_spherical` flag.

Parameters

in	<i>posn</i>	Inertial position of the point of interest relative to the gravitational body.
out	<i>body_grav_accel</i>	Acceleration at the point of interest due to the gravitational body.
out	<i>dgdx</i>	Gravity gradient at the point of interest.
out	<i>Pot</i>	Specific gravitational potential energy.

Implemented in `jeod::SphericalHarmonicsGravityControls`.

Referenced by `gravitation()`.

8.1.3.3 `calc_relativistic()`

```
void jeod::GravityControls::calc_relativistic (
    const RefFrame & point_of_interest,
    const double rel_pos[3],
    const double rel_vel[3],
    double perturbing_accel[3] ) [protected]
```

Calculates the relativistic correction to gravitational acceleration.

Parameters

<i>point_of_interest</i>	The point of interest, as a reference frame.
<i>rel_pos</i>	Displacement vector from the grav body to the POI.
<i>rel_vel</i>	Time derivative of <i>rel_pos</i> .
<i>perturbing_accel</i>	Output relativistic accel, sans the Newtonian term.

Implements equation 27 (Folkner) / equation 4 (Genova) to compute a parameteric post-Newtonian correction to gravitation. The referenced equation is of the form

$$\begin{aligned} \mathbf{a}_{A,\text{pm-pm}} = & \sum_{B \neq A} \frac{GM_B}{r_{AB}^3} (\mathbf{r}_B - \mathbf{r}_A) \left(1 + \frac{s_1}{c^2}\right) \\ & + \frac{1}{c^2} \sum_{B \neq A} \frac{GM_B}{r_{AB}^3} (\mathbf{v}_A - \mathbf{v}_B) \left((\mathbf{r}_A - \mathbf{r}_B) \cdot ((2 + 2\gamma)\mathbf{v}_A - (1 + 2\gamma)\mathbf{v}_B) \right) \\ & + \frac{3 + 4\gamma}{2c^2} \sum_{B \neq A} \frac{GM_B}{r_{AB}} \mathbf{a}_B \end{aligned}$$

where \mathbf{a}_B is the net acceleration of gravitating body B toward the other gravitating bodies (typically taken to be the Newtonian gravitational acceleration) and

$$\begin{aligned} s_1 = & -2(\beta + \gamma) \sum_{C \neq A} \frac{GM_C}{r_{AC}} - (2\beta - 1) \sum_{C \neq A} \frac{GM_C}{r_{BC}} \\ & + \gamma v_a^2 + (1 + \gamma) v_b^2 - 2(1 + \gamma) \mathbf{v}_A \cdot \mathbf{v}_B \\ & - \frac{3}{2} \left(\frac{(\mathbf{r}_A - \mathbf{r}_B) \cdot \mathbf{v}_B}{r_B} \right)^2 \\ & + \frac{1}{2} (\mathbf{r}_B - \mathbf{r}_A) \cdot \mathbf{a}_B \end{aligned}$$

In terms of the referenced equation, the intent of this function is to compute the relativistic portion of the acceleration of body A toward body B . With this, the expression this function computes is

$$\Delta a_{A,B} = \frac{1}{c} \frac{GM_B}{r_{AB}} \left\{ \begin{aligned} & \frac{\mathbf{r}_B - \mathbf{r}_A}{r_{AB}^2} s_1 \\ & + \frac{\mathbf{v}_A - \mathbf{v}_B}{r_{AB}^2} \left((\mathbf{r}_A - \mathbf{r}_B) \cdot ((2 + 2\gamma)\mathbf{v}_A - (1 + 2\gamma)\mathbf{v}_B) \right) \\ & + \frac{3 + 4\gamma}{2} \mathbf{a}_B \end{aligned} \right\}$$

Note that the common factor $\frac{1}{c} \frac{GM_B}{r_{AB}}$ is unitless and thus each of the three terms in the braced expression has units of acceleration.

The referenced equations explicitly involve the parameterized post-Newtonian (PPN) factors β and γ . This function hardcodes both of those factors as one, consistent with general relativity. For example, the factor $(3 + 4\gamma)/2$ becomes 3.5 in the code. Magic numbers that involve β or γ , including a factor of one (e.g., $2\beta - 1$), are noted in comments.

Definition at line 456 of file gravity_controls.cc.

References body, jeod::GravityManager::get_bodies(), grav_manager, jeod::GravitySource::inertial, jeod::GravitySource::mu, and jeod::speed_of_light_sq.

Referenced by gravitation().

8.1.3.4 calc_spherical()

```
void jeod::GravityControls::calc_spherical (
    const double integ_pos[3],
    const double posn[3],
    const GravityIntegFrame & grav_source_frame,
    double body_grav_accel[3],
    double dgdx[3][3],
    double & pot ) [protected]
```

Calculate the spherical gravitational acceleration, either directly or as a third body acceleration.

Parameters

<i>integ_pos</i>	Point of interest location, integ frame coordinates
<i>posn</i>	Vector from gravitational body to point of interest
<i>grav_source_frame</i>	Frame corresponding to the gravitational body
<i>body_grav_accel</i>	Acceleration at integ_pos due to the grav body
<i>dgdx</i>	Gravity gradient at integ_pos due to the grav body
<i>pot</i>	Gravitational potential at integ_pos due to the grav body.

Definition at line 291 of file gravity_controls.cc.

References battin_method, body, gradient, jeod::GravityIntegFrame::is_third_body, jeod::GravitySource::mu, and jeod::GravityIntegFrame::pos.

Referenced by gravitation().

8.1.3.5 gravitation() [1/2]

```
void jeod::GravityControls::gravitation (
    const double integ_pos[3],
    unsigned int integ_frame_idx,
    double body_grav_accel[3],
    double dgdx[3][3],
    double Pot[1] ) [virtual]
```

Compute the gravitation at a given position toward a gravity body.

Parameters

in	<i>integ_pos</i>	Point of interest, integ coords Units: M
in	<i>integ_frame_idx</i>	Integ frame index
out	<i>body_grav_accel</i>	Accel for given grav body Units: M/s ²
out	<i>dgdx</i>	Gradient for given grav body Units: 1/s ²
out	<i>Pot</i>	Potential

8.1.5 Field Documentation

8.1.5.1 active

```
bool jeod::GravityControls::active {}
```

Gravity for this body active?

trick_units(—)

Definition at line 101 of file gravity_controls.hh.

Referenced by jeod::GravityManager::gravitation(), reset_control(), jeod::GravityInteraction::sort_controls(), and jeod::SphericalHarmonicsGravityControls::update_deltacoeffs().

8.1.5.2 battin_method

```
bool jeod::GravityControls::battin_method {}
```

Compute third body gravity using Battin's method (Battin, Mathematics and Methods of Astrodynamics)?

trick_units(—)

Definition at line 122 of file gravity_controls.hh.

Referenced by calc_spherical().

8.1.5.3 body

```
GravitySource* jeod::GravityControls::body {}
```

Pointer to the [GravitySource](#) object named by planet_name.

Note

Users should not set this data member in the input file.trick_units(—)

Definition at line 135 of file gravity_controls.hh.

Referenced by calc_relativistic(), calc_spherical(), gravitation(), jeod::SphericalHarmonicsGravityControls←
::initialize_control(), initialize_control(), and reset_control().

8.1.5.4 gradient

```
bool jeod::GravityControls::gradient {}
```

Compute gravity gradient matrix?

trick_units(-)

Definition at line 111 of file gravity_controls.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::calc_nonspherical(), calc_spherical(), and jeod::SphericalHarmonicsGravityControls::check_validity().

8.1.5.5 grav_accel

```
double jeod::GravityControls::grav_accel[3] {}
```

Gravitational acceleration toward the [GravitySource](#) at the location of the DynBody, including third body effects.

trick_units(m/s2)

Definition at line 141 of file gravity_controls.hh.

Referenced by jeod::GravityManager::gravitation(), and jeod::GravityInteraction::sort_controls().

8.1.5.6 grav_accel_magsq

```
double jeod::GravityControls::grav_accel_magsq {}
```

Square of the magnitude of grav_accel.

trick_units(m2/s4)

Definition at line 156 of file gravity_controls.hh.

Referenced by jeod::GravityInteraction::sort_controls().

8.1.5.7 grav_grad

```
double jeod::GravityControls::grav_grad[3][3] {}
```

Gradient of the gravitational acceleration.

trick_units(1/s2)

Definition at line 146 of file gravity_controls.hh.

Referenced by jeod::GravityManager::gravitation().

8.1.5.8 grav_manager

```
GravityManager* jeod::GravityControls::grav_manager {} [protected]
```

Pointer to the simulation-wide [GravityManager](#) object.

Note

Users should not set this data member in the input file. `trick_units(-)`

Definition at line 163 of file `gravity_controls.hh`.

Referenced by `calc_relativistic()`, `jeod::SphericalHarmonicsGravityControls::initialize_control()`, and `initialize_control()`.

8.1.5.9 grav_pot

```
double jeod::GravityControls::grav_pot {}
```

Gravitational potential.

`trick_units(m2/s2)`

Definition at line 151 of file `gravity_controls.hh`.

Referenced by `jeod::GravityManager::gravitation()`.

8.1.5.10 perturbing_only

```
bool jeod::GravityControls::perturbing_only {}
```

Compute only the perturbing gravity?

`trick_units(-)`

Definition at line 116 of file `gravity_controls.hh`.

Referenced by `gravitation()`.

8.1.5.11 relativistic

```
bool jeod::GravityControls::relativistic {}
```

Indicates that the relativistic correction to Newtonian gravitation is to be computed.

The public methods `enable_relativistic_correction` and `disable_relativistic_correction` set / clear this flag. `trick_units(-)`

Definition at line 129 of file `gravity_controls.hh`.

Referenced by `gravitation()`.

8.1.5.12 skip_spherical

```
bool jeod::GravityControls::skip_spherical {} [protected]
```

Some derived classes' `calc_nonspherical` method computes all contributions to gravitation, including spherical.

Those classes need to set this flag. The flag is clear in the base class and in the [SphericalHarmonicsGravityControls](#) derived class.`trick_units(-)`

Definition at line 185 of file `gravity_controls.hh`.

Referenced by `gravitation()`.

8.1.5.13 source_name

```
std::string jeod::GravityControls::source_name
```

Planet name.

`trick_units(-)`

Definition at line 96 of file `gravity_controls.hh`.

Referenced by `jeod::SphericalHarmonicsGravityControls::check_validity()`, `initialize_control()`, and `reset_control()`.

8.1.5.14 spherical

```
bool jeod::GravityControls::spherical {}
```

Ignore non-spherical effects?

`trick_units(-)`

Definition at line 106 of file `gravity_controls.hh`.

Referenced by `jeod::SphericalHarmonicsGravityControls::check_validity()`, `gravitation()`, and `reset_control()`.

8.1.5.15 subscribed_to_inertial

```
bool jeod::GravityControls::subscribed_to_inertial {} [protected]
```

Indicates that a subscription to the planet-centered inertial frame of the planet associated with the `gravity_source` been issued.

Note

Users should not set this data member in the input file.`trick_units(-)`

Definition at line 170 of file `gravity_controls.hh`.

Referenced by `reset_control()`.

8.1.5.16 subscribed_to_pfix

```
bool jeod::GravityControls::subscribed_to_pfix {} [protected]
```

Indicates that a subscription to the planet-centered, planet-fixed frame of the planet associated with the gravity_↔ source been issued.

Note

Users should not set this data member in the input file.trick_units(-)

Definition at line 177 of file gravity_controls.hh.

Referenced by reset_control().

```

8.3.3 Member Function Documentation

8.3.3.1 add_control()

```
void jeod::GravityInteraction::add_control (
    GravityControls * control ) [virtual]
```

Add a new [GravityControls](#) to the grav_controls list.

Parameters

in	<i>control</i>	Control to be added
----	----------------	---------------------

Definition at line 91 of file gravity_interaction.cc.

References [jeod::GravityMessages::duplicate_entry](#), and [grav_controls](#).

8.3.3.2 initialize_controls()

```
void jeod::GravityInteraction::initialize_controls (
    BaseDynManager & dyn_manager,
    GravityManager & grav_manager ) [virtual]
```

Initialize all [GravityControls](#) in the grav_controls list.

Parameters

in	<i>dyn_manager</i>	Ref to Dyn Manager
in	<i>grav_manager</i>	Ref to Gravity Manager

Definition at line 135 of file gravity_interaction.cc.

References [grav_controls](#), and [reset_controls\(\)](#).

8.3.3.3 operator=()

```
GravityInteraction& jeod::GravityInteraction::operator= (
    const GravityInteraction & frame ) [delete]
```

8.3.3.4 remove_control()

```
void jeod::GravityInteraction::remove_control (
    GravityControls * control ) [virtual]
```

Remove a [GravityControls](#) from the grav_controls list.

Parameters

in	<i>control</i>	GravityControls to be removed.
----	----------------	--

Definition at line 113 of file gravity_interaction.cc.

References [grav_controls](#), and [jeod::GravityMessages::missing_entry](#).

8.3.3.5 reset_controls()

```
void jeod::GravityInteraction::reset_controls (
    BaseDynManager & dyn_manager ) [virtual]
```

Reset all [GravityControls](#) in the grav_controls list.

Definition at line 150 of file gravity_interaction.cc.

References [grav_controls](#).

Referenced by [initialize_controls\(\)](#).

8.3.3.6 set_integ_frame()

```
void jeod::GravityInteraction::set_integ_frame (
    const EphemerisRefFrame & ref_frame,
    const BaseDynManager & dyn_manager ) [virtual]
```

Set the integration frame and associated integration frame index.

Assumptions and Limitations

- Provided frame is a valid integration frame.

Parameters

in	<i>ref_frame</i>	Integration frame
in	<i>dyn_manager</i>	Dynamics manager

Definition at line 82 of file gravity_interaction.cc.

References integ_frame_index.

8.3.3.7 sort_controls()

```
void jeod::GravityInteraction::sort_controls ( ) [virtual]
```

Sort the [GravityControls](#) in the grav_controls list in increasing acceleration magnitude order.

Definition at line 163 of file gravity_interaction.cc.

References jeod::GravityControls::accel_mag_less_ptr(), jeod::GravityControls::active, jeod::GravityControls::grav_accel, jeod::GravityControls::grav_accel_magsq, and grav_controls.

8.3.4 Friends And Related Function Documentation

8.3.4.1 init_attrjeod__GravityInteraction

```
void init_attrjeod__GravityInteraction ( ) [friend]
```

8.3.4.2 InputProcessor

```
friend class InputProcessor [friend]
```

Definition at line 98 of file gravity_interaction.hh.

8.3.5 Field Documentation

8.3.5.1 grav_accel

```
double jeod::GravityInteraction::grav_accel[3] {}
```

The total gravitational acceleration of the DynBody toward all planetary with which the vehicle interacts gravitationally.

The acceleration is expressed in the DynBody's integration frame. The gravitational acceleration of the integration frame itself toward the planetary bodies is excluded from this total acceleration. For example, for a vehicle integrated in Earth-centered inertial, the Sun component of the total gravitational acceleration is the Newtonian gravitation acceleration of the vehicle toward the Sun less the Newtonian gravitational acceleration of the Earth toward the Sun.trick_units(m/s2)

Definition at line 118 of file gravity_interaction.hh.

Referenced by jeod::GravityManager::gravitation().

8.3.5.2 grav_controls

```
JeodPointerVector<GravityControls>::type jeod::GravityInteraction::grav_controls
```

The gravity controls list for a DynBody specifies the planetary bodies with which the DynBody interacts and specifies the nature of those interactions.

trick_io(**)

Definition at line 138 of file gravity_interaction.hh.

Referenced by add_control(), jeod::GravityManager::gravitation(), GravityInteraction(), initialize_controls(), remove_control(), reset_controls(), sort_controls(), and ~GravityInteraction().

8.3.5.3 grav_grad

```
double jeod::GravityInteraction::grav_grad[3][3] {}
```

The gradient of the gravitational acceleration vector evaluated at the DynBody's position, expressed in the vehicle's integration frame.

trick_units(1/s2)

Definition at line 124 of file gravity_interaction.hh.

Referenced by jeod::GravityManager::gravitation().

8.3.5.4 grav_pot

```
double jeod::GravityInteraction::grav_pot {}
```

The total gravitational potential at the location of the DynBody due to the gravity fields of all "active" gravitational bodies (i.e., planets).

trick_units(m2/s2)

Definition at line 131 of file gravity_interaction.hh.

Referenced by jeod::GravityManager::gravitation().

8.3.5.5 integ_frame_index

```
unsigned int jeod::GravityInteraction::integ_frame_index {9999}
```

The integration frame index number of the DynBody's integration frame.

This data member must be kept in strict synchronization with the DynBody's integration frame.trick_units(-)

Definition at line 105 of file gravity_interaction.hh.

Referenced by jeod::GravityManager::gravitation(), and set_integ_frame().

8.4.1 Detailed Description

The master gravitational model for a simulation.

Definition at line 88 of file gravity_manager.hh.

8.4.2 Constructor & Destructor Documentation

8.4.2.1 GravityManager() [1/2]

```
jeod::GravityManager::GravityManager ( )
```

[GravityManager](#) constructor.

Definition at line 57 of file gravity_manager.cc.

8.4.2.2 ~GravityManager()

```
jeod::GravityManager::~~GravityManager ( )
```

[GravityManager](#) destructor.

Definition at line 67 of file gravity_manager.cc.

References [sources](#).

8.4.2.3 GravityManager() [2/2]

```
jeod::GravityManager::GravityManager (
    const GravityManager & ) [delete]
```

8.4.3 Member Function Documentation

8.4.3.1 add_grav_source()

```
void jeod::GravityManager::add_grav_source (
    GravitySource & source )
```

Create a gravitational body, initialize it with the supplied gravity coefficients, and add it to the vector of bodies.

Parameters

in	<i>source</i>	Gravity source to be added
----	---------------	----------------------------

Definition at line 109 of file gravity_manager.cc.

References jeod::GravityMessages::duplicate_entry, find_grav_source(), jeod::GravityMessages::invalid_name, jeod::GravitySource::name, and sources.

8.4.3.2 find_grav_source()

```
GravitySource * jeod::GravityManager::find_grav_source (
    const std::string & source_name ) const
```

Find the gravitational body with the given name.

Returns

Pointer to found body

Parameters

in	<i>source_name</i>	Name of gravity source to be found
----	--------------------	------------------------------------

Definition at line 78 of file gravity_manager.cc.

References jeod::GravityMessages::invalid_name, jeod::GravitySource::name, and sources.

Referenced by add_grav_source(), and jeod::GravityControls::initialize_control().

8.4.3.3 get_bodies()

```
const std::vector<GravitySource *> & jeod::GravityManager::get_bodies ( ) const [inline]
```

Get the vector of gravitational bodies.

Warning

Do not modify the vector, or elements of it.

Definition at line 148 of file gravity_manager.hh.

Referenced by jeod::GravityControls::calc_relativistic().

8.4.3.4 gravitation() [1/2]

```
void jeod::GravityManager::gravitation (
    const double integ_pos[3],
    GravityInteraction & grav )
```

Compute the gravitational attraction of gravitational bodies on the provided dynamic body.

Assumptions and Limitations

- Only the gravitational bodies specified in the dynamic body's gravity controls have a bearing on the dynamic body's state.

Warning

This overload is deprecated.

Parameters

in	<i>integ_pos</i>	Dyn body location (integ frm) Units: M
in, out	<i>grav</i>	Gravity interaction

Definition at line 177 of file gravity_manager.cc.

References `jeod::GravityControls::active`, `jeod::GravityInteraction::grav_accel`, `jeod::GravityControls::grav_↔ accel`, `jeod::GravityInteraction::grav_controls`, `jeod::GravityInteraction::grav_grad`, `jeod::GravityControls::grav_↔ grad`, `jeod::GravityInteraction::grav_pot`, `jeod::GravityControls::grav_pot`, `jeod::GravityControls::gravitation()`, and `jeod::GravityInteraction::integ_frame_index`.

8.4.3.5 gravitation() [2/2]

```
void jeod::GravityManager::gravitation (
    const RefFrame & point,
    GravityInteraction & grav )
```

Compute the gravitational attraction of gravitational bodies on the provided dynamic body.

Assumptions and Limitations

- Only the gravitational bodies specified in the dynamic body's gravity controls have a bearing on the dynamic body's state.
- The supplied reference frame is assumed to be a direct child of the dynamic body's integration frame.

Parameters

in	<i>point</i>	Point of interest, as a reference frame.
in, out	<i>grav</i>	Gravity interaction

Definition at line 222 of file gravity_manager.cc.

References `jeod::GravityControls::active`, `jeod::GravityInteraction::grav_accel`, `jeod::GravityControls::grav_↔ accel`, `jeod::GravityInteraction::grav_controls`, `jeod::GravityInteraction::grav_grad`, `jeod::GravityControls::grav_↔ grad`, `jeod::GravityInteraction::grav_pot`, `jeod::GravityControls::grav_pot`, `jeod::GravityControls::gravitation()`, and `jeod::GravityInteraction::integ_frame_index`.

8.4.3.6 initialize_model()

```
void jeod::GravityManager::initialize_model (
    BaseDynManager & manager )
```

Perform base initialization.

Note

This method differs from the other `initialize_models` methods in that this method takes no coefficients as arguments. The `S_define` must call `add_grav_source` explicitly when this signature is used.

Parameters

in, out	<i>manager</i>	Dynamics manager
---------	----------------	------------------

Definition at line 144 of file gravity_manager.cc.

8.4.3.7 initialize_state()

```
void jeod::GravityManager::initialize_state (
    const BaseDynManager & manager )
```

Pass the `initialize_state` method to each [GravitySource](#) object registered with the gravity manager.

Assumptions and Limitations

- Initialization phasing: The following must have been called prior to calling this method:
 - [GravityManager::initialize_model](#) to register the [GravityManager](#) object with the dynamics manager
 - [GravityManager::add_grav_source](#) to register all [GravitySource](#) objects in the simulation with the gravity manager.
 - `Planet::register_model` to associate the planet with a [GravitySource](#).
 - `DynamicsManager::activate_ephemerides` to identify which reference frames can serve as integration frames.

Parameters

in, out	<i>manager</i>	Dynamics manager
---------	----------------	------------------

Definition at line 165 of file gravity_manager.cc.

- class [InputProcessor](#)
- void [init_attrjeod__SphericalHarmonicsDeltaControls](#) ()

8.9.1 Detailed Description

Provides controls for how a variational model affects a vehicle.

Definition at line 81 of file `spherical_harmonics_delta_controls.hh`.

8.9.2 Constructor & Destructor Documentation

8.9.2.1 SphericalHarmonicsDeltaControls()

```
jeod::SphericalHarmonicsDeltaControls::SphericalHarmonicsDeltaControls ( ) [default]
```

8.9.2.2 ~SphericalHarmonicsDeltaControls()

```
jeod::SphericalHarmonicsDeltaControls::~~SphericalHarmonicsDeltaControls ( ) [default]
```

8.9.3 Friends And Related Function Documentation

8.9.3.1 init_attrjeod__SphericalHarmonicsDeltaControls

```
void init_attrjeod__SphericalHarmonicsDeltaControls ( ) [friend]
```

8.9.3.2 InputProcessor

```
friend class InputProcessor [friend]
```

Definition at line 83 of file spherical_harmonics_delta_controls.hh.

8.9.4 Field Documentation

8.9.4.1 active

```
bool jeod::SphericalHarmonicsDeltaControls::active {}
```

Is this variational gravity effect active for this body?

trick_units(-)

Definition at line 98 of file spherical_harmonics_delta_controls.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::sum_deltacoeffs().

8.9.4.2 degree

```
unsigned int jeod::SphericalHarmonicsDeltaControls::degree {}
```

Coefficient degree to be used for this gravity effect.

trick_units(-)

Definition at line 108 of file spherical_harmonics_delta_controls.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::sum_deltacoeffs().

8.9.4.3 first_order_only

```
bool jeod::SphericalHarmonicsDeltaControls::first_order_only {true}
```

Calculate first-order term of this effect only; default to true for 2.0.

trick_units(—)

Definition at line 103 of file spherical_harmonics_delta_controls.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::sum_deltacoeffs().

8.9.4.4 grav_effect

```
SphericalHarmonicsDeltaCoeffs* jeod::SphericalHarmonicsDeltaControls::grav_effect {}
```

Pointer to associated coefficient-altering gravitational effect.

trick_units(—)

Definition at line 88 of file spherical_harmonics_delta_controls.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::add_deltacontrol(), and jeod::SphericalHarmonicsGravityControls::sum_deltacoeffs().

8.9.4.5 grav_source

```
SphericalHarmonicsGravitySource* jeod::SphericalHarmonicsDeltaControls::grav_source {}
```

Pointer to the gravity body associated with this effect.

trick_units(—)

Definition at line 93 of file spherical_harmonics_delta_controls.hh.

8.9.4.6 order

```
unsigned int jeod::SphericalHarmonicsDeltaControls::order {}
```

Coefficient order to be used for this gravity effect.

trick_units(—)

Definition at line 113 of file spherical_harmonics_delta_controls.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::sum_deltacoeffs().

The documentation for this class was generated from the following file:

- [spherical_harmonics_delta_controls.hh](#)

8.10 jeod::SphericalHarmonicsGravityControls Class Reference

Specifies whether and how a [SphericalHarmonicsGravitySource](#) affects a vehicle.

```
#include <spherical_harmonics_gravity_controls.hh>
```

Inheritance diagram for jeod::SphericalHarmonicsGravityControls:

Public Member Functions

- [SphericalHarmonicsGravityControls](#) ()
SphericalHarmonicsGravityControls constructor.
- [~SphericalHarmonicsGravityControls](#) () override
SphericalHarmonicsGravityControls destructor.
- [SphericalHarmonicsGravityControls](#) (const [SphericalHarmonicsGravityControls](#) &)=delete
- [SphericalHarmonicsGravityControls](#) & operator= (const [SphericalHarmonicsGravityControls](#) &)=delete
- void [initialize_control](#) ([GravityManager](#) &[grav_manager](#)) override
Initialize this GravityControl.
- virtual void [add_deltacontrol](#) ([SphericalHarmonicsDeltaControls](#) *[delta_control](#))
Add a new GravityDeltaControls to the var_effects list.
- unsigned int [get_degree](#) ()
Output the current functional degree.
- unsigned int [get_order](#) ()
Output the current functional order.
- void [get_degree_order](#) (unsigned int &[current_degree](#), unsigned int &[current_order](#))
Output the current functional degree and order.
- unsigned int [get_grad_degree](#) ()
Output the current functional gradient degree.
- unsigned int [get_grad_order](#) ()
Output the current functional gradient order.
- void [get_grad_degree_order](#) (unsigned int &[curr_grad_degree](#), unsigned int &[curr_grad_order](#))
Output the current functional gradient degree and order.
- void [set_degree](#) (unsigned int [new_degree](#))
Update the functional degree.
- void [set_order](#) (unsigned int [new_order](#))
Update the functional order.
- void [set_degree_order](#) (unsigned int [new_degree](#), unsigned int [new_order](#))
Update the functional degree and order.
- void [set_grad_degree](#) (unsigned int [new_grad_degree](#))
Update the functional gradient degree.
- void [set_grad_order](#) (unsigned int [new_grad_order](#))
Update the functional gradient order.
- void [set_grad_degree_order](#) (unsigned int [new_grad_degree](#), unsigned int [new_grad_order](#))
Update the functional gradient degree and order.
- void [disable_min_radius_warnings](#) ()
Disable minimum radius warnings for this spherical harmonics gravity control.

Data Fields

- [SphericalHarmonicsGravitySource](#) * [harmonics_source](#) {}
The [GravitySource](#) pointer from the base class, recast.
- double ** [Pnm](#) {}
LeGendre polynomials used to calculate non-spherical attraction.
- unsigned int [delta_degree](#) {}
Coefficient degree to be used for totaling up all active [delta_coeffs](#).
- unsigned int [delta_order](#) {}
Coefficient order to be used for totaling up all active [delta_coeffs](#).
- double ** [delta_Cnm](#) {}
Array for collecting all active normalized real (cosine) variational spherical harmonic coefficients.
- double ** [delta_Snm](#) {}
Array for collecting all active normalized real (sine) variational spherical harmonic coefficients.
- double [total_dC20](#) {}
delta C20 coefficient for collecting first order effects of all active [delta_coeffs](#).
- unsigned int [degree](#) {}
Non-spherical degree to be used.
- unsigned int [order](#) {}
Non-spherical order to be used.
- unsigned int [gradient_degree](#) {}
Non-spherical degree to be used for computing gradient.
- unsigned int [gradient_order](#) {}
Non-spherical order to be used for computing gradient.
- [JeodPointerVector](#)< [SphericalHarmonicsDeltaControls](#) >::type [var_effects](#)
List of controls for variational gravity effects like solid-body tides.

Protected Member Functions

- void [calc_nonspherical](#) (const double integ_pos[3], const double posn[3], const [GravityIntegFrame](#) &grav_↔
source_frame, double body_grav_accel[3], double dgdx[3][3], double &pot) override
Compute the gravitational acceleration at a given position toward a gravitational body assuming the body has a non-spherical mass distribution.
- virtual void [check_validity](#) ()
Check the validity of the gravity controls.
- virtual void [update_deltacoeffs](#) ()
Command all of the gravitational variation effects to update themselves.
- virtual void [sum_deltacoeffs](#) ()
Loop over all of the active gravitational variation effects models and aggregate their changes to the gravity coefficients into the top-level delta-coeffs "bin" for this gravity body.

Protected Attributes

- bool [min_radius_warn](#) {}
Indicates that the minimum radius threshold has been crossed and that a warning has been issued for such.

Friends

- class [InputProcessor](#)
- void [init_attrjeod__SphericalHarmonicsGravityControls](#) ()

Additional Inherited Members

8.10.1 Detailed Description

Specifies whether and how a [SphericalHarmonicsGravitySource](#) affects a vehicle.

Definition at line 87 of file spherical_harmonics_gravity_controls.hh.

8.10.2 Constructor & Destructor Documentation

8.10.2.1 SphericalHarmonicsGravityControls() [1/2]

```
jeod::SphericalHarmonicsGravityControls::SphericalHarmonicsGravityControls ( )
```

[SphericalHarmonicsGravityControls](#) constructor.

Definition at line 55 of file spherical_harmonics_gravity_controls.cc.

References `var_effects`.

8.10.2.2 ~SphericalHarmonicsGravityControls()

```
jeod::SphericalHarmonicsGravityControls::~~SphericalHarmonicsGravityControls ( ) [override]
```

[SphericalHarmonicsGravityControls](#) destructor.

Definition at line 65 of file spherical_harmonics_gravity_controls.cc.

References `jeod::SphericalHarmonicsGravitySource::degree`, `delta_Cnm`, `delta_degree`, `delta_Snm`, `harmonics_↔source`, `Pnm`, and `var_effects`.

8.10.2.3 SphericalHarmonicsGravityControls() [2/2]

```
jeod::SphericalHarmonicsGravityControls::SphericalHarmonicsGravityControls (
    const SphericalHarmonicsGravityControls & ) [delete]
```

8.10.3 Member Function Documentation

8.10.3.1 add_deltacontrol()

```
void jeod::SphericalHarmonicsGravityControls::add_deltacontrol (
    SphericalHarmonicsDeltaControls * delta_control ) [virtual]
```

Add a new GravityDeltaControls to the `var_effects` list.

Parameters

in	<i>delta_control</i>	Control to be added
----	----------------------	---------------------

Definition at line 145 of file spherical_harmonics_gravity_controls.cc.

References [jeod::SphericalHarmonicsDeltaCoeffs::degree](#), [delta_Cnm](#), [delta_degree](#), [delta_order](#), [delta_Snm](#), [jeod::SphericalHarmonicsDeltaControls::grav_effect](#), [jeod::SphericalHarmonicsDeltaCoeffs::order](#), and [var_effects](#).

8.10.3.2 calc_nonspherical()

```
void jeod::SphericalHarmonicsGravityControls::calc_nonspherical (
    const double integ_pos [3],
    const double posn[3],
    const GravityIntegFrame & grav_source_frame,
    double body_grav_accel[3],
    double dgdx[3][3],
    double & pot ) [override], [protected], [virtual]
```

Compute the gravitational acceleration at a given position toward a gravitational body assuming the body has a non-spherical mass distribution.

Parameters

in	<i>posn</i>	Point of interest, inrtl coords Units: M
out	<i>body_grav_accel</i>	Accel for given grav body Units: M/s2
out	<i>dgdx</i>	Gradient for given grav body Units: 1/s2
out	<i>Pot</i>	Potential

Implements [jeod::GravityControls](#).

Definition at line 54 of file spherical_harmonics_calc_nonspherical.cc.

References [jeod::SphericalHarmonicsGravitySource::alpha](#), [jeod::SphericalHarmonicsGravitySource::beta](#), [jeod::SphericalHarmonicsGravitySource::Cnm](#), [degree](#), [jeod::GravityMessages::domain_error](#), [jeod::SphericalHarmonicsGravitySource::eta](#), [jeod::GravityControls::gradient](#), [gradient_degree](#), [gradient_order](#), [harmonics_source](#), [jeod::SphericalHarmonicsGravitySource::int_to_double](#), [min_radius_warn](#), [jeod::GravitySource::mu](#), [jeod::GravitySource::name](#), [jeod::SphericalHarmonicsGravitySource::nrdiag](#), [order](#), [jeod::GravitySource::pfix](#), [Pnm](#), [jeod::SphericalHarmonicsGravitySource::radius](#), [jeod::SphericalHarmonicsGravitySource::Snm](#), [sum_deltacoeffs\(\)](#), [jeod::SphericalHarmonicsGravitySource::tide_free](#), [jeod::SphericalHarmonicsGravitySource::tide_free_delta](#), [total_dC20](#), [update_deltacoeffs\(\)](#), [jeod::SphericalHarmonicsGravitySource::upsilon](#), [var_effects](#), [jeod::SphericalHarmonicsGravitySource::xi](#), and [jeod::SphericalHarmonicsGravitySource::zeta](#).

8.10.3.3 check_validity()

```
void jeod::SphericalHarmonicsGravityControls::check_validity ( ) [protected], [virtual]
```

Check the validity of the gravity controls.

Definition at line 322 of file spherical_harmonics_gravity_controls.cc.

References jeod::SphericalHarmonicsGravitySource::degree, degree, jeod::GravityControls::gradient, gradient_order, harmonics_source, jeod::GravityMessages::invalid_limit, jeod::GravityMessages::invalid_object, jeod::GravitySource::name, jeod::SphericalHarmonicsGravitySource::order, order, jeod::GravityControls::source_name, and jeod::GravityControls::spherical.

Referenced by initialize_control(), set_degree(), set_degree_order(), set_grad_degree(), set_grad_degree_order(), set_grad_order(), and set_order().

8.10.3.4 disable_min_radius_warnings()

```
void jeod::SphericalHarmonicsGravityControls::disable_min_radius_warnings ( ) [inline]
```

Disable minimum radius warnings for this spherical harmonics gravity control.

Definition at line 227 of file spherical_harmonics_gravity_controls.hh.

8.10.3.5 get_degree()

```
unsigned int jeod::SphericalHarmonicsGravityControls::get_degree ( )
```

Output the current functional degree.

Returns

Current degree

Definition at line 188 of file spherical_harmonics_gravity_controls.cc.

References degree.

8.10.3.6 get_degree_order()

```
void jeod::SphericalHarmonicsGravityControls::get_degree_order (
    unsigned int & current_degree,
    unsigned int & current_order )
```

Output the current functional degree and order.

Parameters

out	<i>current_degree</i>	Current degree
out	<i>current_order</i>	Current order

Definition at line 207 of file spherical_harmonics_gravity_controls.cc.

References degree, and order.

8.10.3.7 get_grad_degree()

```
unsigned int jeod::SphericalHarmonicsGravityControls::get_grad_degree ( )
```

Output the current functional gradient degree.

Returns

Current gradient degree

Definition at line 217 of file spherical_harmonics_gravity_controls.cc.

References gradient_degree.

8.10.3.8 get_grad_degree_order()

```
void jeod::SphericalHarmonicsGravityControls::get_grad_degree_order (
    unsigned int & curr_grad_degree,
    unsigned int & curr_grad_order )
```

Output the current functional gradient degree and order.

Parameters

out	<i>curr_grad_degree</i>	Current gradient degree
out	<i>curr_grad_order</i>	Current gradient order

Definition at line 236 of file spherical_harmonics_gravity_controls.cc.

References gradient_degree, and gradient_order.

8.10.3.9 get_grad_order()

```
unsigned int jeod::SphericalHarmonicsGravityControls::get_grad_order ( )
```

Output the current functional gradient order.

Returns

Current gradient order

Definition at line 226 of file spherical_harmonics_gravity_controls.cc.

References `gradient_order`.

8.10.3.10 `get_order()`

```
unsigned int jeod::SphericalHarmonicsGravityControls::get_order ( )
```

Output the current functional order.

Returns

Current order

Definition at line 197 of file spherical_harmonics_gravity_controls.cc.

References `order`.

8.10.3.11 `initialize_control()`

```
void jeod::SphericalHarmonicsGravityControls::initialize_control (
    GravityManager & grav_manager ) [override], [virtual]
```

Initialize this GravityControl.

Parameters

in	<i>grav_manager</i>	Ref to Gravity Manager
----	---------------------	------------------------

Reimplemented from [jeod::GravityControls](#).

Definition at line 86 of file spherical_harmonics_gravity_controls.cc.

References `jeod::GravityControls::body`, `check_validity()`, `jeod::SphericalHarmonicsGravitySource::degree`, `jeod::GravityControls::grav_manager`, `harmonics_source`, `jeod::GravityControls::initialize_control()`, and `Pnm`.

8.10.3.12 `operator=()`

```
SphericalHarmonicsGravityControls& jeod::SphericalHarmonicsGravityControls::operator= (
    const SphericalHarmonicsGravityControls & ) [delete]
```

8.10.3.13 set_degree()

```
void jeod::SphericalHarmonicsGravityControls::set_degree (
    unsigned int new_degree )
```

Update the functional degree.

Parameters

in	<i>new_degree</i>	New desired degree
----	-------------------	--------------------

Definition at line 247 of file spherical_harmonics_gravity_controls.cc.

References [check_validity\(\)](#), and [degree](#).

8.10.3.14 set_degree_order()

```
void jeod::SphericalHarmonicsGravityControls::set_degree_order (
    unsigned int new_degree,
    unsigned int new_order )
```

Update the functional degree and order.

Parameters

in	<i>new_degree</i>	New desired degree
in	<i>new_order</i>	New desired order

Definition at line 272 of file spherical_harmonics_gravity_controls.cc.

References [check_validity\(\)](#), [degree](#), and [order](#).

8.10.3.15 set_grad_degree()

```
void jeod::SphericalHarmonicsGravityControls::set_grad_degree (
    unsigned int new_grad_degree )
```

Update the functional gradient degree.

Parameters

in	<i>new_grad_degree</i>	New desired degree
----	------------------------	--------------------

Definition at line 285 of file spherical_harmonics_gravity_controls.cc.

References [check_validity\(\)](#), and [gradient_degree](#).

8.10.3.16 set_grad_degree_order()

```
void jeod::SphericalHarmonicsGravityControls::set_grad_degree_order (
    unsigned int new_grad_degree,
    unsigned int new_grad_order )
```

Update the functional gradient degree and order.

Parameters

in	<i>new_grad_degree</i>	New desired degree
in	<i>new_grad_order</i>	New desired order

Definition at line 310 of file spherical_harmonics_gravity_controls.cc.

References `check_validity()`, `gradient_degree`, and `gradient_order`.

8.10.3.17 set_grad_order()

```
void jeod::SphericalHarmonicsGravityControls::set_grad_order (
    unsigned int new_grad_order )
```

Update the functional gradient order.

Parameters

in	<i>new_grad_order</i>	New desired order
----	-----------------------	-------------------

Definition at line 297 of file spherical_harmonics_gravity_controls.cc.

References `check_validity()`, and `gradient_order`.

8.10.3.18 set_order()

```
void jeod::SphericalHarmonicsGravityControls::set_order (
    unsigned int new_order )
```

Update the functional order.

Parameters

in	<i>new_order</i>	New desired order
----	------------------	-------------------

Definition at line 259 of file spherical_harmonics_gravity_controls.cc.

References `check_validity()`, and `order`.

8.10.3.19 `sum_deltacoeffs()`

```
void jeod::SphericalHarmonicsGravityControls::sum_deltacoeffs ( ) [protected], [virtual]
```

Loop over all of the active gravitational variation effects models and aggregate their changes to the gravity coefficients into the top-level delta-coeffs "bin" for this gravity body.

Definition at line 469 of file spherical_harmonics_gravity_controls.cc.

References `jeod::SphericalHarmonicsDeltaControls::active`, `jeod::SphericalHarmonicsDeltaCoeffs::dC20`, `jeod::SphericalHarmonicsDeltaControls::degree`, `jeod::SphericalHarmonicsDeltaCoeffs::delta_Cnm`, `delta_Cnm`, `jeod::SphericalHarmonicsGravitySource::delta_coeffs`, `delta_degree`, `delta_order`, `jeod::SphericalHarmonicsDeltaCoeffs::delta_Snm`, `delta_Snm`, `jeod::SphericalHarmonicsDeltaControls::first_order_only`, `jeod::SphericalHarmonicsDeltaControls::grav_effect`, `harmonics_source`, `jeod::SphericalHarmonicsDeltaControls::order`, `total_dC20`, and `var_effects`.

Referenced by `calc_nonspherical()`.

8.10.3.20 `update_deltacoeffs()`

```
void jeod::SphericalHarmonicsGravityControls::update_deltacoeffs ( ) [protected], [virtual]
```

Command all of the gravitational variation effects to update themselves.

Definition at line 450 of file spherical_harmonics_gravity_controls.cc.

References `jeod::GravityControls::active`, `jeod::SphericalHarmonicsGravitySource::delta_coeffs`, `harmonics_source`, and `var_effects`.

Referenced by `calc_nonspherical()`.

8.10.4 Friends And Related Function Documentation

8.10.4.1 `init_attrjeod__SphericalHarmonicsGravityControls`

```
void init_attrjeod__SphericalHarmonicsGravityControls ( ) [friend]
```

8.10.4.2 InputProcessor

```
friend class InputProcessor [friend]
```

Definition at line 89 of file spherical_harmonics_gravity_controls.hh.

8.10.5 Field Documentation

8.10.5.1 degree

```
unsigned int jeod::SphericalHarmonicsGravityControls::degree {}
```

Non-spherical degree to be used.

NOTE: this data being public is deprecated and should not be relied upon in future releases. Use the provided accessor methods instead. `trick_units(-)`

Definition at line 146 of file spherical_harmonics_gravity_controls.hh.

Referenced by `calc_nonspherical()`, `check_validity()`, `get_degree()`, `get_degree_order()`, `set_degree()`, and `set_degree_order()`.

8.10.5.2 delta_Cnm

```
double** jeod::SphericalHarmonicsGravityControls::delta_Cnm {}
```

Array for collecting all active normalized real (cosine) variational spherical harmonic coefficients.

`trick_units(-)`

Definition at line 127 of file spherical_harmonics_gravity_controls.hh.

Referenced by `add_deltacontrol()`, `sum_deltacoeffs()`, and `~SphericalHarmonicsGravityControls()`.

8.10.5.3 delta_degree

```
unsigned int jeod::SphericalHarmonicsGravityControls::delta_degree {}
```

Coefficient degree to be used for totaling up all active `delta_coeffs`.

`trick_units(-)`

Definition at line 116 of file spherical_harmonics_gravity_controls.hh.

Referenced by `add_deltacontrol()`, `sum_deltacoeffs()`, and `~SphericalHarmonicsGravityControls()`.

8.10.5.4 `delta_order`

```
unsigned int jeod::SphericalHarmonicsGravityControls::delta_order {}
```

Coefficient order to be used for totaling up all active `delta_coeffs`.

`trick_units(-)`

Definition at line 121 of file `spherical_harmonics_gravity_controls.hh`.

Referenced by `add_deltacontrol()`, and `sum_deltacoeffs()`.

8.10.5.5 `delta_Snm`

```
double** jeod::SphericalHarmonicsGravityControls::delta_Snm {}
```

Array for collecting all active normalized real (sine) variational spherical harmonic coefficients.

`trick_units(-)`

Definition at line 133 of file `spherical_harmonics_gravity_controls.hh`.

Referenced by `add_deltacontrol()`, `sum_deltacoeffs()`, and `~SphericalHarmonicsGravityControls()`.

8.10.5.6 `gradient_degree`

```
unsigned int jeod::SphericalHarmonicsGravityControls::gradient_degree {}
```

Non-spherical degree to be used for computing gradient.

NOTE: this data being public is deprecated and should not be relied upon in future releases. Use the provided accessor methods instead.`trick_units(-)`

Definition at line 160 of file `spherical_harmonics_gravity_controls.hh`.

Referenced by `calc_nonspherical()`, `check_validity()`, `get_grad_degree()`, `get_grad_degree_order()`, `set_grad_degree()`, and `set_grad_degree_order()`.

8.10.5.7 `gradient_order`

```
unsigned int jeod::SphericalHarmonicsGravityControls::gradient_order {}
```

Non-spherical order to be used for computing gradient.

NOTE: this data being public is deprecated and should not be relied upon in future releases. Use the provided accessor methods instead.`trick_units(-)`

Definition at line 167 of file `spherical_harmonics_gravity_controls.hh`.

Referenced by `calc_nonspherical()`, `check_validity()`, `get_grad_degree_order()`, `get_grad_order()`, `set_grad_degree_order()`, and `set_grad_order()`.

8.10.5.8 harmonics_source

```
SphericalHarmonicsGravitySource* jeod::SphericalHarmonicsGravityControls::harmonics_source {}
```

The [GravitySource](#) pointer from the base class, recast.

Note

Users should not set this data member in the input file. `trick_units(-)`

Definition at line 106 of file `spherical_harmonics_gravity_controls.hh`.

Referenced by `calc_nonspherical()`, `check_validity()`, `initialize_control()`, `sum_deltacoeffs()`, `update_deltacoeffs()`, and `~SphericalHarmonicsGravityControls()`.

8.10.5.9 min_radius_warn

```
bool jeod::SphericalHarmonicsGravityControls::min_radius_warn {} [protected]
```

Indicates that the minimum radius threshold has been crossed and that a warning has been issued for such.

This prevents a spew of messages regarding such under-threshold conditions.

Note

Users should not set this data member in the input file unless you wish to disable all such messages. `trick_units(-)`

Definition at line 99 of file `spherical_harmonics_gravity_controls.hh`.

Referenced by `calc_nonspherical()`.

8.10.5.10 order

```
unsigned int jeod::SphericalHarmonicsGravityControls::order {}
```

Non-spherical order to be used.

NOTE: this data being public is deprecated and should not be relied upon in future releases. Use the provided accessor methods instead. `trick_units(-)`

Definition at line 153 of file `spherical_harmonics_gravity_controls.hh`.

Referenced by `calc_nonspherical()`, `check_validity()`, `get_degree_order()`, `get_order()`, `set_degree_order()`, and `set_order()`.

8.10.5.11 Pnm

```
double** jeod::SphericalHarmonicsGravityControls::Pnm {}
```

LeGendre polynomials used to calculate non-spherical attraction.

trick_units(-)

Definition at line 111 of file spherical_harmonics_gravity_controls.hh.

Referenced by calc_nonspherical(), initialize_control(), and ~SphericalHarmonicsGravityControls().

8.10.5.12 total_dC20

```
double jeod::SphericalHarmonicsGravityControls::total_dC20 {}
```

delta C20 coefficient for collecting first order effects of all active delta_coefs.

trick_units(-)

Definition at line 139 of file spherical_harmonics_gravity_controls.hh.

Referenced by calc_nonspherical(), and sum_deltacoeffs().

8.10.5.13 var_effects

```
JeodPointerVector<SphericalHarmonicsDeltaControls>::type jeod::SphericalHarmonicsGravity↔  
Controls::var_effects
```

List of controls for variational gravity effects like solid-body tides.

trick_io(**)

Definition at line 172 of file spherical_harmonics_gravity_controls.hh.

Referenced by add_deltacontrol(), calc_nonspherical(), SphericalHarmonicsGravityControls(), sum_deltacoeffs(), update_deltacoeffs(), and ~SphericalHarmonicsGravityControls().

The documentation for this class was generated from the following files:

- [spherical_harmonics_gravity_controls.hh](#)
- [spherical_harmonics_calc_nonspherical.cc](#)
- [spherical_harmonics_gravity_controls.cc](#)

8.11 jeod::SphericalHarmonicsGravitySource Class Reference

Models the gravity for a specific planet using spherical harmonics.

```
#include <spherical_harmonics_gravity_source.hh>
```

Inheritance diagram for jeod::SphericalHarmonicsGravitySource:

Public Member Functions

- [SphericalHarmonicsGravitySource](#) ()
SphericalHarmonicsGravitySource constructor.
- [~SphericalHarmonicsGravitySource](#) () override
SphericalHarmonicsGravitySource destructor.
- [SphericalHarmonicsGravitySource](#) (const [SphericalHarmonicsGravitySource](#) &)=delete
- [SphericalHarmonicsGravitySource](#) & operator= (const [SphericalHarmonicsGravitySource](#) &)=delete
- virtual void [initialize_body](#) ()
Initialize Gottlieb gravity coefficients.
- int [find_deltacoeff](#) (const [SphericalHarmonicsDeltaCoeffs](#) &delta_coeff) const
Find the given variational gravity effect if already exists.
- void [add_deltacoeff](#) ([SphericalHarmonicsDeltaCoeffsInit](#) &var_init, [BaseDynManager](#) &dyn_manager, [SphericalHarmonicsDeltaCoeffs](#) &var_effect)
Add a gravitational variation effect (i.e., a delta coeffs) to the vector of effects.

Data Fields

- double [radius](#) {}
Spherical harmonics distance scale, typically the planet's mean equatorial radius.
- unsigned int [degree](#) {}
The degree of the spherical harmonics gravity coefficients.
- unsigned int [order](#) {}
The order of the spherical harmonics gravity coefficients.
- double ** [Cnm](#) {}
Normalized real (cosine) spherical harmonic coefficients.
- double ** [Snm](#) {}
Normalized imaginary (sine) spherical harmonic coefficients.
- bool [tide_free](#) {}
Is C20 coefficient free of the permanent tide effect?

- void [init_attrjeod__SphericalHarmonicsGravitySource](#) ()

8.11.1 Detailed Description

Models the gravity for a specific planet using spherical harmonics.

Definition at line 90 of file `spherical_harmonics_gravity_source.hh`.

8.11.2 Constructor & Destructor Documentation

8.11.2.1 `SphericalHarmonicsGravitySource()` [1/2]

```
jeod::SphericalHarmonicsGravitySource::SphericalHarmonicsGravitySource ( )
```

[SphericalHarmonicsGravitySource](#) constructor.

Definition at line 57 of file `spherical_harmonics_gravity_source.cc`.

References [delta_coeffs](#).

8.11.2.2 ~SphericalHarmonicsGravitySource()

```
jeod::SphericalHarmonicsGravitySource::~~SphericalHarmonicsGravitySource ( ) [override]
```

[SphericalHarmonicsGravitySource](#) destructor.

Definition at line 67 of file `spherical_harmonics_gravity_source.cc`.

References `a_by_rad`, `alpha`, `beta`, `Cnm`, `degree`, `delta_coeffs`, `eta`, `int_to_double`, `nrdiag`, `Snm`, `upsilon`, `xi`, and `zeta`.

8.11.2.3 SphericalHarmonicsGravitySource() [2/2]

```
jeod::SphericalHarmonicsGravitySource::SphericalHarmonicsGravitySource (
    const SphericalHarmonicsGravitySource & ) [delete]
```

8.11.3 Member Function Documentation

8.11.3.1 add_deltacoeff()

```
void jeod::SphericalHarmonicsGravitySource::add_deltacoeff (
    SphericalHarmonicsDeltaCoeffsInit & var_init,
    BaseDynManager & dyn_manager,
    SphericalHarmonicsDeltaCoeffs & var_effect )
```

Add a gravitational variation effect (i.e., a delta coeffs) to the vector of effects.

Parameters

in	<i>var_init</i>	Effect init structure
in	<i>dyn_manager</i>	Dynamics manager
in	<i>var_effect</i>	Delta coeff to be added

Definition at line 240 of file `spherical_harmonics_gravity_source.cc`.

References `delta_coeffs`, `jeod::GravityMessages::duplicate_entry`, `find_deltacoeff()`, `jeod::SphericalHarmonicsDeltaCoeffs::grav_source`, `jeod::SphericalHarmonicsDeltaCoeffs::initialize()`, and `jeod::GravitySource::name`.

8.11.3.2 find_deltacoeff()

```
int jeod::SphericalHarmonicsGravitySource::find_deltacoeff (
    const SphericalHarmonicsDeltaCoeffs & delta_coeff ) const
```

Find the given variational gravity effect if already exists.

Returns

Index number of delta-coeff; -1 if not found

Parameters

in	<i>delta_coeff</i>	delta-coeff to be found
----	--------------------	-------------------------

Definition at line 211 of file spherical_harmonics_gravity_source.cc.

References `delta_coeffs`, and `jeod::GravitySource::name`.

Referenced by `add_deltacoeff()`.

8.11.3.3 initialize_body()

```
void jeod::SphericalHarmonicsGravitySource::initialize_body ( ) [virtual]
```

Initialize Gottlieb gravity coefficients.

Definition at line 86 of file spherical_harmonics_gravity_source.cc.

References `a_by_rad`, `alpha`, `beta`, `degree`, `eta`, `int_to_double`, `nrdiag`, `upsilon`, `xi`, and `zeta`.

8.11.3.4 operator=()

```
SphericalHarmonicsGravitySource& jeod::SphericalHarmonicsGravitySource::operator= (
    const SphericalHarmonicsGravitySource & ) [delete]
```

8.11.4 Friends And Related Function Documentation**8.11.4.1 init_attrjeod__SphericalHarmonicsGravitySource**

```
void init_attrjeod__SphericalHarmonicsGravitySource ( ) [friend]
```

8.11.4.2 InputProcessor

```
friend class InputProcessor [friend]
```

Definition at line 92 of file spherical_harmonics_gravity_source.hh.

8.11.5 Field Documentation

8.11.5.1 a_by_rad

```
double* jeod::SphericalHarmonicsGravitySource::a_by_rad {}
```

(Planet radius/vehicle distance)ⁿ

trick_units(—)

Definition at line 133 of file spherical_harmonics_gravity_source.hh.

Referenced by initialize_body(), and ~SphericalHarmonicsGravitySource().

8.11.5.2 alpha

```
double* jeod::SphericalHarmonicsGravitySource::alpha {}
```

Gottlieb coefficient alpha.

trick_units(—)

Definition at line 138 of file spherical_harmonics_gravity_source.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::calc_nonspherical(), initialize_body(), and ~SphericalHarmonicsGravitySource().

8.11.5.3 beta

```
double* jeod::SphericalHarmonicsGravitySource::beta {}
```

Gottlieb coefficient beta.

trick_units(—)

Definition at line 143 of file spherical_harmonics_gravity_source.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::calc_nonspherical(), initialize_body(), and ~SphericalHarmonicsGravitySource().

8.11.5.4 Cnm

```
double** jeod::SphericalHarmonicsGravitySource::Cnm {}
```

Normalized real (cosine) spherical harmonic coefficients.

trick_units(-)

Definition at line 113 of file spherical_harmonics_gravity_source.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::calc_nonspherical(), jeod::SphericalHarmonicsGravitySource_moon_GRAIL150_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GGM05C_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GEMT1_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GGM02C_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_mars_MRO110B2_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_moon_LP150Q_default_data::initialize(), and ~SphericalHarmonicsGravitySource().

8.11.5.5 degree

```
unsigned int jeod::SphericalHarmonicsGravitySource::degree {}
```

The degree of the spherical harmonics gravity coefficients.

trick_units(-)

Definition at line 103 of file spherical_harmonics_gravity_source.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::check_validity(), jeod::SphericalHarmonicsGravitySource_earth_spherical_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_moon_GRAIL150_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_mars_MRO110B2_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GGM02C_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GEMT1_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_moon_LP150Q_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GGM05C_default_data::initialize(), initialize_body(), jeod::SphericalHarmonicsGravityControls::initialize_control(), jeod::SphericalHarmonicsGravityControls::~SphericalHarmonicsGravityControls(), and ~SphericalHarmonicsGravitySource().

8.11.5.6 delta_coeffs

```
JeodPointerVector<SphericalHarmonicsDeltaCoeffs>::type jeod::SphericalHarmonicsGravitySource::delta_coeffs
```

List of all gravity coefficient altering effects such as solid-body tides.

trick_io(**)

Definition at line 179 of file spherical_harmonics_gravity_source.hh.

Referenced by add_deltacoeff(), find_deltacoeff(), SphericalHarmonicsGravitySource(), jeod::SphericalHarmonicsGravityControls::sum_deltacoeffs(), jeod::SphericalHarmonicsGravityControls::update_deltacoeffs(), and ~SphericalHarmonicsGravitySource().

8.11.5.7 eta

```
double** jeod::SphericalHarmonicsGravitySource::eta {}
```

Gottlieb coefficient eta.

trick_units(-)

Definition at line 153 of file spherical_harmonics_gravity_source.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::calc_nonspherical(), initialize_body(), and ~SphericalHarmonicsGravitySource().

8.11.5.8 int_to_double

```
double* jeod::SphericalHarmonicsGravitySource::int_to_double {}
```

0 to degree+1 cast as doubles

trick_units(-)

Definition at line 173 of file spherical_harmonics_gravity_source.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::calc_nonspherical(), initialize_body(), and ~SphericalHarmonicsGravitySource().

8.11.5.9 nrdiag

```
double* jeod::SphericalHarmonicsGravitySource::nrdiag {}
```

Gottlieb coefficient nrdiag.

trick_units(-)

Definition at line 168 of file spherical_harmonics_gravity_source.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::calc_nonspherical(), initialize_body(), and ~SphericalHarmonicsGravitySource().

8.11.5.10 order

```
unsigned int jeod::SphericalHarmonicsGravitySource::order {}
```

The order of the spherical harmonics gravity coefficients.

trick_units(–)

Definition at line 108 of file spherical_harmonics_gravity_source.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::check_validity(), jeod::SphericalHarmonicsGravitySource_earth_spherical_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_moon_GRAIL150_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GGM05C_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_mars_MRO110B2_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GEMT1_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_moon_LP150Q_default_data::initialize(), and jeod::SphericalHarmonicsGravitySource_earth_GGM02C_default_data::initialize().

8.11.5.11 radius

```
double jeod::SphericalHarmonicsGravitySource::radius {}
```

Spherical harmonics distance scale, typically the planet's mean equatorial radius.

trick_units(m)

Definition at line 98 of file spherical_harmonics_gravity_source.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::calc_nonspherical(), jeod::SphericalHarmonicsGravitySource_earth_spherical_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_moon_GRAIL150_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_moon_spherical_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GEMT1_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GGM02C_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_moon_LP150Q_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_mars_spherical_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_mars_MRO110B2_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_sun_spherical_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GGM05C_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_jupiter_spherical_default_data::initialize(), and jeod::SphericalHarmonicsSolidBodyTides::update().

8.11.5.12 Snm

```
double** jeod::SphericalHarmonicsGravitySource::Snm {}
```

Normalized imaginary (sine) spherical harmonic coefficients.

trick_units(–)

Definition at line 118 of file spherical_harmonics_gravity_source.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::calc_nonspherical(), jeod::SphericalHarmonicsGravitySource_moon_GRAIL150_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GGM05C_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GEMT1_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_earth_GGM02C_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_mars_MRO110B2_default_data::initialize(), jeod::SphericalHarmonicsGravitySource_moon_LP150Q_default_data::initialize(), and ~SphericalHarmonicsGravitySource().

8.11.5.13 `tide_free`

```
bool jeod::SphericalHarmonicsGravitySource::tide_free {}
```

Is C20 coefficient free of the permanent tide effect?

`trick_units(-)`

Definition at line 123 of file `spherical_harmonics_gravity_source.hh`.

Referenced by `jeod::SphericalHarmonicsGravityControls::calc_nonspherical()`, `jeod::SphericalHarmonicsGravitySource_moon_GRAIL150_default_data::initialize()`, `jeod::SphericalHarmonicsGravitySource_moon_LP150Q_default_data::initialize()`, `jeod::SphericalHarmonicsGravitySource_earth_GGM02C_default_data::initialize()`, `jeod::SphericalHarmonicsGravitySource_mars_MRO110B2_default_data::initialize()`, `jeod::SphericalHarmonicsGravitySource_earth_GGM05C_default_data::initialize()`, and `jeod::SphericalHarmonicsGravitySource_earth_GEMT1_default_data::initialize()`.

8.11.5.14 `tide_free_delta`

```
double jeod::SphericalHarmonicsGravitySource::tide_free_delta {}
```

Number to be added to C20 to remove the permanent tide.

`trick_units(-)`

Definition at line 128 of file `spherical_harmonics_gravity_source.hh`.

Referenced by `jeod::SphericalHarmonicsGravityControls::calc_nonspherical()`, `jeod::SphericalHarmonicsGravitySource_moon_GRAIL150_default_data::initialize()`, `jeod::SphericalHarmonicsGravitySource_moon_LP150Q_default_data::initialize()`, `jeod::SphericalHarmonicsGravitySource_earth_GGM02C_default_data::initialize()`, `jeod::SphericalHarmonicsGravitySource_earth_GGM05C_default_data::initialize()`, and `jeod::SphericalHarmonicsGravitySource_earth_GEMT1_default_data::initialize()`.

8.11.5.15 `upsilon`

```
double** jeod::SphericalHarmonicsGravitySource::upsilon {}
```

Gottlieb coefficient `upsilon`.

`trick_units(-)`

Definition at line 163 of file `spherical_harmonics_gravity_source.hh`.

Referenced by `jeod::SphericalHarmonicsGravityControls::calc_nonspherical()`, `initialize_body()`, and `~SphericalHarmonicsGravitySource()`.

8.11.5.16 xi

```
double** jeod::SphericalHarmonicsGravitySource::xi {}
```

Gottlieb coefficient xi.

trick_units(-)

Definition at line 148 of file spherical_harmonics_gravity_source.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::calc_nonspherical(), initialize_body(), and ~SphericalHarmonicsGravitySource().

8.11.5.17 zeta

```
double** jeod::SphericalHarmonicsGravitySource::zeta {}
```

Gottlieb coefficient zeta.

trick_units(-)

Definition at line 158 of file spherical_harmonics_gravity_source.hh.

Referenced by jeod::SphericalHarmonicsGravityControls::calc_nonspherical(), initialize_body(), and ~SphericalHarmonicsGravitySource().

- [moon_LP150Q.hh](#)
- [moon_LP150Q.cc](#)

8.22 jeod::SphericalHarmonicsGravitySource_moon_spherical_default_data Class Reference

```
#include <moon_spherical.hh>
```

Inheritance diagram for [jeod::SphericalHarmonicsGravitySource_moon_spherical_default_data](#):

Public Member Functions

- void [initialize](#) ([SphericalHarmonicsGravitySource *](#)) override

8.22.1 Detailed Description

Definition at line 55 of file moon_spherical.hh.

8.22.2 Member Function Documentation

8.22.2.1 initialize()

```
void jeod::SphericalHarmonicsGravitySource_moon_spherical_default_data::initialize (
    SphericalHarmonicsGravitySource * SphericalHarmonicsGravitySource_ptr ) [override],
[virtual]
```

Implements [jeod::SphericalHarmonicsGravitySource_default_data](#).

Definition at line 39 of file moon_spherical.cc.

References [jeod::GravitySource::mu](#), [jeod::GravitySource::name](#), and [jeod::SphericalHarmonicsGravitySource↵::radius](#).

The documentation for this class was generated from the following files:

- [moon_spherical.hh](#)
- [moon_spherical.cc](#)

8.23 jeod::SphericalHarmonicsGravitySource_sun_spherical_default_data Class Reference

```
#include <sun_spherical.hh>
```

Inheritance diagram for [jeod::SphericalHarmonicsGravitySource_sun_spherical_default_data](#):

Public Member Functions

- void [initialize](#) ([SphericalHarmonicsGravitySource *](#)) override

8.23.1 Detailed Description

Definition at line 55 of file sun_spherical.hh.

8.23.2 Member Function Documentation

8.23.2.1 initialize()

```
void jeod::SphericalHarmonicsGravitySource_sun_spherical_default_data::initialize (
    SphericalHarmonicsGravitySource * SphericalHarmonicsGravitySource_ptr ) [override],
[virtual]
```

Implements [jeod::SphericalHarmonicsGravitySource_default_data](#).

Definition at line 40 of file `sun_spherical.cc`.

References [jeod::GravitySource::mu](#), [jeod::GravitySource::name](#), and [jeod::SphericalHarmonicsGravitySource::radius](#).

The documentation for this class was generated from the following files:

- [sun_spherical.hh](#)
- [sun_spherical.cc](#)

8.24 jeod::SphericalHarmonicsSolidBodyTides Class Reference

Models solid body tidal effects.

```
#include <spherical_harmonics_solid_body_tides.hh>
```

Inheritance diagram for `jeod::SphericalHarmonicsSolidBodyTides`:

Public Member Functions

- [SphericalHarmonicsSolidBodyTides](#) ()=default
- [~SphericalHarmonicsSolidBodyTides](#) () override=default
- void [initialize](#) ([SphericalHarmonicsDeltaCoeffsInit](#) &var_init, BaseDynManager &dyn_manager) override
Initialize the solid body tidal model.
- void [update](#) ([SphericalHarmonicsGravityControls](#) &controls) override
Update the solid-body tidal delta-coefficients.

Friends

- class [InputProcessor](#)
- void [init_attrjeod__SphericalHarmonicsSolidBodyTides](#) ()

Additional Inherited Members

8.24.1 Detailed Description

Models solid body tidal effects.

Definition at line 89 of file spherical_harmonics_solid_body_tides.hh.

8.24.2 Constructor & Destructor Documentation

8.24.2.1 SphericalHarmonicsSolidBodyTides()

```
jeod::SphericalHarmonicsSolidBodyTides::SphericalHarmonicsSolidBodyTides ( ) [default]
```

8.24.2.2 ~SphericalHarmonicsSolidBodyTides()

```
jeod::SphericalHarmonicsSolidBodyTides::~~SphericalHarmonicsSolidBodyTides ( ) [override],
[default]
```

8.24.3 Member Function Documentation

8.24.3.1 initialize()

```
void jeod::SphericalHarmonicsSolidBodyTides::initialize (
    SphericalHarmonicsDeltaCoeffsInit & var_init,
    BaseDynManager & dyn_manager ) [override], [virtual]
```

Initialize the solid body tidal model.

Parameters

in	<i>var_init</i>	Effect init structure
in	<i>dyn_manager</i>	Dynamics manager

Reimplemented from [jeod::SphericalHarmonicsDeltaCoeffs](#).

Definition at line 58 of file spherical_harmonics_solid_body_tides.cc.

References [jeod::SphericalHarmonicsTidalEffects::initialize\(\)](#).

8.24.3.2 update()

```
void jeod::SphericalHarmonicsSolidBodyTides::update (
    SphericalHarmonicsGravityControls & controls ) [override], [virtual]
```

Update the solid-body tidal delta-coefficients.

Parameters

in	<i>controls</i>	Gravity controls for planet
----	-----------------	-----------------------------

Reimplemented from [jeod::SphericalHarmonicsDeltaCoeffs](#).

Definition at line 69 of file spherical_harmonics_solid_body_tides.cc.

References [jeod::SphericalHarmonicsDeltaCoeffs::dC20](#), [jeod::SphericalHarmonicsDeltaCoeffs::grav_source](#), [jeod::SphericalHarmonicsTidalEffects::k2](#), [jeod::GravitySource::mu](#), [jeod::SphericalHarmonicsTidalEffects::num_tidal_bodies](#), [jeod::SphericalHarmonicsTidalEffects::pfix](#), [jeod::SphericalHarmonicsGravitySource::radius](#), [jeod::SphericalHarmonicsTidalEffects::tidal_bodies](#), and [jeod::SphericalHarmonicsTidalEffects::tidal_bodies_inertial](#).

8.27 jeod::SphericalHarmonicsTidalEffects Class Reference

Models tidal effects as a delta on top of a gravity model.

```
#include <spherical_harmonics_tidal_effects.hh>
```

Inheritance diagram for `jeod::SphericalHarmonicsTidalEffects`:

Public Member Functions

- [SphericalHarmonicsTidalEffects](#) ()=default
- [~SphericalHarmonicsTidalEffects](#) () override
SphericalHarmonicsTidalEffects destructor.
- void [initialize](#) ([SphericalHarmonicsDeltaCoeffsInit](#) &var_init, BaseDynManager &dyn_manager) override
Initialize a SphericalHarmonicsTidalEffects object.
- void [update](#) ([SphericalHarmonicsGravityControls](#) &controls) override
Pure virtual update method.

Data Fields

- double [xp](#) {}
Copy of polar motion coefficient xp (from polar motion class).
- double [yp](#) {}
Copy of polar motion coefficient yp (from polar motion class).
- double [k2](#) {}
The love number.
- double ** [Knm](#) {}
A matrix of love numbers.
- unsigned int [num_tidal_bodies](#) {}
The number of tidal bodies named in tidal_bodies.

Protected Attributes

- Planet ** [tidal_bodies](#) {}
The tidal bodies.
- RefFrame ** [tidal_bodies_inertial](#) {}
Pointers to the tidal_bodies inertial reference frames.
- RefFrame * [pfix](#) {}
The planet fixed reference frame of the subject body.

Friends

- class [InputProcessor](#)
- void [init_attrjeod__SphericalHarmonicsTidalEffects](#) ()

8.27.1 Detailed Description

Models tidal effects as a delta on top of a gravity model.

Definition at line 91 of file `spherical_harmonics_tidal_effects.hh`.

8.27.2 Constructor & Destructor Documentation

8.27.2.1 SphericalHarmonicsTidalEffects()

```
jeod::SphericalHarmonicsTidalEffects::SphericalHarmonicsTidalEffects ( ) [default]
```

8.27.2.2 ~SphericalHarmonicsTidalEffects()

```
jeod::SphericalHarmonicsTidalEffects::~~SphericalHarmonicsTidalEffects ( ) [override]
```

[SphericalHarmonicsTidalEffects](#) destructor.

Definition at line 65 of file `spherical_harmonics_tidal_effects.cc`.

8.27.3 Member Function Documentation

8.27.3.1 initialize()

```
void jeod::SphericalHarmonicsTidalEffects::initialize (
    SphericalHarmonicsDeltaCoeffsInit & gen_var_init,
    BaseDynManager & dyn_manager ) [override], [virtual]
```

Initialize a [SphericalHarmonicsTidalEffects](#) object.

This method overrides and calls the base class initialize method.

Parameters

in	<i>gen_var_init</i>	Effect init structure
in	<i>dyn_manager</i>	Dynamics manager

Reimplemented from [jeod::SphericalHarmonicsDeltaCoeffs](#).

Definition at line 78 of file spherical_harmonics_tidal_effects.cc.

References [jeod::SphericalHarmonicsDeltaCoeffs::degree](#), [jeod::SphericalHarmonicsDeltaCoeffs::grav_source](#), [jeod::SphericalHarmonicsDeltaCoeffs::initialize\(\)](#), [jeod::GravityMessages::invalid_name](#), [jeod::GravityMessages::invalid_object](#), [jeod::SphericalHarmonicsTidalEffectsInit::k2](#), [jeod::SphericalHarmonicsTidalEffectsInit::Knm](#), [jeod::SphericalHarmonicsTidalEffectsInit::num_tidal_bodies](#), [jeod::SphericalHarmonicsDeltaCoeffs::order](#), [jeod::GravitySource::pfix](#), [jeod::GravitySource::pfix](#), [jeod::SphericalHarmonicsTidalEffectsInit::tidal_body_names](#), [jeod::SphericalHarmonicsTidalEffectsInit::xp](#), [jeod::SphericalHarmonicsTidalEffectsInit::xp](#), [jeod::SphericalHarmonicsTidalEffectsInit::yp](#), and [jeod::SphericalHarmonicsTidalEffectsInit::yp](#).

Referenced by [jeod::SphericalHarmonicsSolidBodyTides::initialize\(\)](#).

8.27.3.2 update()

```
void jeod::SphericalHarmonicsTidalEffects::update (
    SphericalHarmonicsGravityControls & controls ) [override], [virtual]
```

Pure virtual update method.

Parameters

in	<i>controls</i>	Gravity controls for planet
----	-----------------	-----------------------------

Reimplemented from [jeod::SphericalHarmonicsDeltaCoeffs](#).

Definition at line 174 of file spherical_harmonics_tidal_effects.cc.

8.27.4 Friends And Related Function Documentation

```
void init_attrjeod__SphericalHarmonicsTidalEffects ( ) [friend]
```

8.27.4.2 InputProcessor

```
friend class InputProcessor [friend]
```

Definition at line 93 of file spherical_harmonics_tidal_effects.hh.

8.27.5 Field Documentation

8.27.5.1 k2

```
double jeod::SphericalHarmonicsTidalEffects::k2 {}
```

The love number.

Only used for a first order tidal effect model.`trick_units(-)`

Definition at line 108 of file `spherical_harmonics_tidal_effects.hh`.

Referenced by `initialize()`, and `jeod::SphericalHarmonicsSolidBodyTides::update()`.

8.27.5.2 Knm

```
double** jeod::SphericalHarmonicsTidalEffects::Knm {}
```

A matrix of love numbers.

Used for higher order (not first-order) tidal effects.`trick_units(-)`

Definition at line 114 of file `spherical_harmonics_tidal_effects.hh`.

Referenced by `initialize()`.

8.27.5.3 num_tidal_bodies

```
unsigned int jeod::SphericalHarmonicsTidalEffects::num_tidal_bodies {}
```

The number of tidal bodies named in `tidal_bodies`.

`trick_units(count)`

Definition at line 119 of file `spherical_harmonics_tidal_effects.hh`.

Referenced by `initialize()`, and `jeod::SphericalHarmonicsSolidBodyTides::update()`.

8.27.5.4 pfix

```
RefFrame* jeod::SphericalHarmonicsTidalEffects::pfix {} [protected]
```

The planet fixed reference frame of the subject body.

trick_units(—)

Definition at line 136 of file spherical_harmonics_tidal_effects.hh.

Referenced by initialize(), and jeod::SphericalHarmonicsSolidBodyTides::update().

8.27.5.5 tidal_bodies

```
Planet** jeod::SphericalHarmonicsTidalEffects::tidal_bodies {} [protected]
```

The tidal bodies.

Filled out at initialization. Length after init is num_tidal_bodies.trick_units(—)

Definition at line 126 of file spherical_harmonics_tidal_effects.hh.

Referenced by initialize(), and jeod::SphericalHarmonicsSolidBodyTides::update().

8.27.5.6 tidal_bodies_inertial

```
RefFrame** jeod::SphericalHarmonicsTidalEffects::tidal_bodies_inertial {} [protected]
```

Pointers to the tidal_bodies inertial reference frames.

trick_units(—)

Definition at line 131 of file spherical_harmonics_tidal_effects.hh.

Referenced by initialize(), and jeod::SphericalHarmonicsSolidBodyTides::update().

8.27.5.7 xp

```
double jeod::SphericalHarmonicsTidalEffects::xp {}
```

Copy of polar motion coefficient xp (from polar motion class).

trick_units(—)

Definition at line 98 of file spherical_harmonics_tidal_effects.hh.

Referenced by initialize().

8.27.5.8 yp

```
double jeod::SphericalHarmonicsTidalEffects::yp {}
```

Copy of polar motion coefficient yp (from polar motion class).

trick_units(-)

Definition at line 103 of file spherical_harmonics_tidal_effects.hh.

Referenced by initialize().

The documentation for this class was generated from the following files:

Variables

- static constexpr double [jeod::speed_of_light_sq](#) = 89875517873681764.0
The speed of light squared, in m^2/s^2 .

9.12.1 Detailed Description

Define member functions for the GravityControls class.

9.13 gravity_controls.hh File Reference

Define the gravity controls.

```
#include <string>
#include "utils/sim_interface/include/jeod_class.hh"
#include "class_declarations.hh"
#include "dynamics/dyn_manager/include/base_dyn_manager.hh"
#include "gravity_source.hh"
```

Data Structures

- class [jeod::GravityControls](#)
Specifies whether and how a [GravitySource](#) affects a vehicle.

Namespaces

- [jeod](#)
Namespace jeod.

9.13.1 Detailed Description

Define the gravity controls.

9.14 gravity_integ_frame.hh File Reference

Define the gravity integration frame class.

```
#include "utils/sim_interface/include/jeod_class.hh"
#include "class_declarations.hh"
```

Data Structures

- class [jeod::GravityIntegFrame](#)

Class that aids in determining whether gravity should be applied as a direct effect or a third body effect.

Namespaces

- [jeod](#)

Namespace jeod.

9.14.1 Detailed Description

Define the gravity integration frame class.

9.15 gravity_interaction.cc File Reference

Define methods for the GravityInteraction class.

```
#include <algorithm>
#include <cstdlib>
#include "dynamics/dyn_body/include/dyn_body.hh"
#include "dynamics/dyn_manager/include/base_dyn_manager.hh"
#include "environment/ephemerides/ephem_interface/include/ephem_ref_frame.↵
hh"
#include "environment/planet/include/planet.hh"
#include "utils/math/include/matrix3x3.hh"
#include "utils/math/include/vector3.hh"
#include "utils/memory/include/jeod_alloc.hh"
#include "../include/gravity_controls.hh"
#include "../include/gravity_interaction.hh"
#include "../include/gravity_manager.hh"
#include "../include/gravity_messages.hh"
#include "../include/gravity_source.hh"
```

Namespaces

- [jeod](#)

Namespace jeod.

9.15.1 Detailed Description

Define methods for the GravityInteraction class.

9.16 gravity_interaction.hh File Reference

Define the GravityInteraction class, used to represent the gravitational interaction between a DynBody and a set of planetary bodies.

```
#include "utils/container/include/pointer_vector.hh"
#include "utils/sim_interface/include/jeod_class.hh"
#include "class_declarations.hh"
```

Data Structures

- class [jeod::GravityInteraction](#)

Specifies interactions between a vehicle and a set of gravitational bodies.

Namespaces

- [jeod](#)

Namespace jeod.

9.16.1 Detailed Description

Define the GravityInteraction class, used to represent the gravitational interaction between a DynBody and a set of planetary bodies.

Note that while each DynBody instance has a GravityInteraction data member, this class is defined as a part of the gravity model rather than the dyn_body model. This is because the coupling between this class and the other parts of the gravity model is much stronger than the coupling between this class and the dyn_body model.

9.17 gravity_manager.cc File Reference

Define member functions for the GravityManager class.

```
#include <cstddef>
#include <cstring>
#include <string>
#include "dynamics/dyn_manager/include/base_dyn_manager.hh"
#include "utils/math/include/matrix3x3.hh"

#include "utils/container/include/pointer_vector.hh"
#include "utils/sim_interface/include/jeod_class.hh"
#include "class_declarations.hh"
```

Data Structures

- class [jeod::GravityManager](#)

The master gravitational model for a simulation.

Namespaces

- [jeod](#)

Namespace jeod.

9.18.1 Detailed Description

Define the Gravity Manager.

9.19 gravity_messages.cc File Reference

Implement the class GravityMessages.

```
#include "../include/gravity_messages.hh"
```

Namespaces

- [jeod](#)

Namespace jeod.

Macros

- `#define PATH "environment/gravity/"`

9.19.1 Detailed Description

Implement the class GravityMessages.

9.20 gravity_messages.hh File Reference

Define the class GravityMessages, the class that specifies the message IDs used in the gravity model.

```
#include "utils/sim_interface/include/jeod_class.hh"
```

Data Structures

- class `jeod::GravityMessages`
Specifies the message IDs used in the gravity model.

Namespaces

- `jeod`
Namespace jeod.

9.20.1 Detailed Description

Define the class GravityMessages, the class that specifies the message IDs used in the gravity model.

9.21 gravity_source.cc File Reference

Define member functions for the GravitySource class.

```
#include <cstddef>
#include "environment/ephemerides/ephem_interface/include/ephem_ref_frame.↵
hh"
#include "environment/planet/include/planet.hh"

Namespace jeod.

9.45.1 Detailed Description

Define member functions for the SphericalHarmonicsSolidBodyTides class.

9.46 spherical_harmonics_solid_body_tides.hh File Reference

Define the SphericalHarmonicsSolidBodyTides class, which models solid-body tidal effects.

```
#include "utils/sim_interface/include/jeod_class.hh"
#include "class_declarations.hh"
#include "spherical_harmonics_tidal_effects.hh"
```

Data Structures

- class [jeod::SphericalHarmonicsSolidBodyTides](#)

Models solid body tidal effects.

Namespaces

- [jeod](#)

Namespace jeod.

9.46.1 Detailed Description

Define the SphericalHarmonicsSolidBodyTides class, which models solid-body tidal effects.

SphericalHarmonicsSolidBodyTides inherits directly from the SphericalHarmonicsTidalEffects class.

9.47 spherical_harmonics_solid_body_tides_init.hh File Reference

Define the SphericalHarmonicsSolidBodyTidesInit class, which is the initialization class for the solid body tides model.

```
#include "utils/sim_interface/include/jeod_class.hh"
#include "spherical_harmonics_tidal_effects_init.hh"
```

Data Structures

- class [jeod::SphericalHarmonicsSolidBodyTidesInit](#)
Initializes a solid body tides model.

Namespaces

- [jeod](#)
Namespace jeod.

9.47.1 Detailed Description

Define the SphericalHarmonicsSolidBodyTidesInit class, which is the initialization class for the solid body tides model.

9.48 spherical_harmonics_tidal_effects.cc File Reference

Define member functions for the SphericalHarmonicsTidalEffects class.

```
#include <cstdint>
#include "dynamics/dyn_manager/include/base_dyn_manager.hh"
#include "environment/planet/include/planet.hh"
#include "utils/memory/include/jeod_alloc.hh"

#include "../include/spherical_harmonics_tidal_effects_init.hh"
```

Namespaces

- [jeod](#)
Namespace jeod.

9.48.1 Detailed Description

Define member functions for the SphericalHarmonicsTidalEffects class.

9.49 spherical_harmonics_tidal_effects.hh File Reference

Define the class SphericalHarmonicsTidalEffects, which is the base class for solid-body and ocean tidal effects.

```
#include "environment/planet/include/class_declarations.hh"
#include "utils/ref_frames/include/class_declarations.hh"
#include "utils/sim_interface/include/jeod_class.hh"
#include "class_declarations.hh"
#include "spherical_harmonics_delta_coeffs.hh"
```

Data Structures

- class [jeod::SphericalHarmonicsTidalEffects](#)
Models tidal effects as a delta on top of a gravity model.

Namespaces

- [jeod](#)
Namespace jeod.

9.49.1 Detailed Description

Define the class SphericalHarmonicsTidalEffects, which is the base class for solid-body and ocean tidal effects.

SphericalHarmonicsTidalEffects inherits directly from the SphericalHarmonicsDeltaCoeffs class.

9.50 spherical_harmonics_tidal_effects_init.hh File Reference

Define the SphericalHarmonicsTidalEffectsInit class, the initialization class for tidal effects models.

```
#include <string>
#include <vector>
#include "utils/sim_interface/include/jeod_class.hh"
#include "spherical_harmonics_delta_coeffs_init.hh"
```

Data Structures

- class [jeod::SphericalHarmonicsTidalEffectsInit](#)
Initializes a tidal gravity model.

Namespaces

- [jeod](#)
Namespace jeod.

9.50.1 Detailed Description

Define the SphericalHarmonicsTidalEffectsInit class, the initialization class for tidal effects models.
